

# Intuit QuickBooks Cash Register Plus

QuickBooks Cash Register Plus is as easy and affordable as a cash register, but enables retailers to do so much more. It allows them to ring up sales and credit cards faster, automatically track sales data and customer information, and run instant reports to make more informed business decisions. With all their essential tasks organized in one place, retailers will have more time for customers and their business.

## Key New Features and Enhancements

**Easy to Get Started.** Retailers can be up and running in minutes – all they need to do is enter basic information to customize Cash Register Plus for their business. Short video tutorials and simple screens that look like a cash register make it easy to learn and use, and existing product or customer data can be imported directly into the system.

### Put Customer and Sales Data at Your Fingertips.

- **Run Reports.** Cash Register Plus allows small businesses to run reports that show what's selling, what's not, and what's most profitable, automatically tracking sales data by product, department, customer and employee.
- **Get Information on Your Customers.** Businesses can track customers' names and contact information while ringing up sales, allowing them to identify each customer's preferences and provide more personalized service.
- **Easily Export Customer Information.** Cash Register Plus enables easy export of customer information so that retailers can create targeted mailings to keep bringing customers back.

**Ring Up Sales in a Flash.** Cash Register Plus handles sales quickly and easily with simple screens that look just like a cash register, allowing retailers to work more quickly when ringing up sales to reduce customer frustration.

- **Use Shortcuts to Expedite Sales.** Ringing up sales and adding discounts is a breeze with shortcut keys for tasks done most often. Cash Register Plus allows retailers to set up item codes and departments on the fly so they don't have to key in the same prices multiple times. The bar code scanner hardware, which is sold separately, expedites the process even more.
- **Track Returns, Store Credit and Gift Certificate Balances.** Retailers can look up prior transactions by date, customer and more, allowing them to track returns, add discounts on the fly and see store credit easily.
- **Save Time and Money Accepting Credit and Debit Cards.** The system allows retailers to skip the cost and extra step of using a separate credit card terminal, letting them process credit and debit card transactions right from their PC.<sup>1</sup> This feature saves money, eliminating the need for buying or leasing a separate credit card terminal, and reduces the chance for errors made when re-entering the sales price into a separate terminal.

**Save Time on Bookkeeping and Taxes.** At the end of the day, a simple wizard helps reconcile the cash drawer and record sales with just a few clicks of a mouse. Sales and sales tax data are automatically recorded so tax information can be prepared more quickly. In addition, sales data can be easily exported to QuickBooks accounting software to save time and avoid errors.<sup>2</sup>

**Essential Retail Hardware.** With the Cash Register Plus software and hardware bundle, small businesses have everything necessary to turn a PC into a cash register, including a receipt printer, cash drawer and credit card swipe – all guaranteed to work together.
