### Welcome

Welcome to QuickBooks. Whether you've been running your business for years or are just starting out, having an organized, efficient way to manage your business can save you time, money, and a lot of frustration.

Use this *Installation and Setup Guide* to get up and running as fast as possible.

**Note:** Since this guide covers multiple editions of QuickBooks, the name "QuickBooks" is used to refer to any of these editions. When information in this guide applies to a specific edition of QuickBooks, the specific edition name will be used.

### What's in this guide

2	Hardware and software requirements
5	Installing QuickBooks
5	New user installation
6	Existing user (upgrader) installation
10	Registering QuickBooks
10	Getting the latest updates to QuickBooks
10	Converting data from other applications
12	Setting up your company in QuickBooks
18	Frequently Asked Questions

## Hardware and software requirements

### Processor, memory, and disk space for QuickBooks Simple Start/Pro/Premier on Windows 7, Vista, or XP

- At least 2.0GHz 4 processor (2.4GHz recommended)
- At least 1GB of RAM for a single user
- At least 2GB of RAM for multiple, concurrent users
- 2.5GB of disk space (additional space required for data files)

### Disk space requirements for additional software

- 250MB for Microsoft .NET 3.5 Runtime, provided on the QuickBooks CD

### Additional hardware and software

- Operating systems supported (U.S. versions with Regional Language set to U.S. English recommended):

Windows 7, all editions except Starter and Basic

Windows XP (SP2 or later strongly recommended), all editions

Windows Vista (w/UAC on), all editions

Windows Server 2003

Windows Server 2008

- 64-bit version of above operating systems also supported
- 4x CD-ROM drive
- Optimized for 1024x768 screen resolution or higher. 1024x768 or higher is required

### Database server requirements

- Microsoft® Windows XP (SP2 or later strongly recommended), Windows 2003 Server, Windows Vista (w/ UAC on), or Windows Server 2008 operating systems
- Linux is supported for Enterprise Solutions only (Fedora 10)

### File server only requirements

- Novell Netware server or Linux file servers can be used with advanced configuration; performance will be impacted on networks running less than 100Mbps

### Integration/compatibility requirements

QuickBooks is capable of integrating with hundreds of 3rd party applications (see [www.marketplace.intuit.com](http://www.marketplace.intuit.com) for the most up-to-date list) in addition to the following standard integrations provided with QuickBooks; additional RAM will enhance the use of these features:

- Preparing letters requires Microsoft® Word 2002, 2003, 2007 or 2010
- Exporting reports requires Microsoft® Excel 2002, 2003, 2007 or 2010
- Contact Synchronization with Microsoft® Outlook requires Outlook 2002, 2003 or 2007

## Installing QuickBooks

- Synchronization with Outlook requires QuickBooks Contact Sync for Outlook (downloadable for free here: [www.quickbooks.com/contact\\_sync](http://www.quickbooks.com/contact_sync))
- Compatible with QuickBooks Customer Manager v2.0 and later, and QuickBooks Client Manager v2.0 and later
- Compatible with QuickBooks Point of Sale v7.0 and later
- Payroll and other online features and services require internet access with at least a 56Kbps connection speed (DSL or cable modem recommended)
- Business Planner functionality requires Adobe Acrobat Reader 5.0 or higher (Premier only)

### Additional notes

- Disk space requirements do not include company data files, so if you manage many companies or if your company data file is very large you may need more disk space.
- Network access speed has a strong impact on performance in networked environments (multi-user, or when accessing data files on other computers). We recommend a minimum 100Mbps network for optimal performance. VPN and wireless networks often cannot provide sufficient, reliable, low-latency performance.
- Disk access speed can affect performance. We recommend a 7200 rpm drive (or 20+ MB/sec); faster is better, and SATA is typically faster than IDE. Disks with large caches may improve performance, depending on usage. Minimum access speed is 4200 rpm.
- QuickBooks will run on both 32-bit and 64-bit processors running XP, Vista and Windows 7, but is compiled as a 32-bit application. Some capabilities (such as memory access) may be greater on 64-bit machines.
- IE and .NET 3.5 cannot be turned off in Windows 7.

### Firewall and antivirus software compatibility

QuickBooks 2011 has been tested with the following:

- Microsoft® Windows XP Firewall (all editions)
- Microsoft® Windows Vista Firewall (all editions)
- Microsoft® Windows 7 Firewall (all editions)
- Symantec Norton® AntiVirus, Internet Security, Norton 360
- Zone Labs' ZoneAlarm
- Microsoft OneCare
- McAfee Anti-Virus Plus, Internet Security Suite, Total Protection
- Trend PC-Cillin, Internet Security

You may need to adjust the settings in these firewall and antivirus products in some configurations to ensure the best possible performance with QuickBooks. For more information see:

- <http://support.quickbooks.intuit.com/support/pages/knowledgebasearticle/403317>
- [www.quickbooks.com/support](http://www.quickbooks.com/support) (search for information about running QuickBooks on a network)

## Using firewall software on a network

If firewall software is running while you install QuickBooks, you will be prompted to allow QuickBooks components to have access to the network. For QuickBooks to operate properly (especially in a multi-user environment) these components (*FileManagement.exe*, *QBDBMgrN.exe*, *QBGDSPlugin.exe*, and *QBW32.exe*) must be allowed to access the network.

Different firewall software applications use different languages when prompting you. Be sure to choose an option that does not block connections to QuickBooks components. Also, some firewall and antivirus software can affect QuickBooks performance. If you experience performance issues you think are related to your firewall software, refer to the firewall documentation or contact your firewall vendor for assistance.

In some cases it might be necessary to adjust settings in these products to ensure the best possible performance with QuickBooks. For more information about firewall configuration, search for “firewall settings” in the in-product Help.

## Multi-user installation requirements

QuickBooks enables up to five users to access company files on a network at the same time. In a multi-user environment, QuickBooks (or the QuickBooks Database Server Manager) must be installed on the computer on which the company file is stored. Each user must have a QuickBooks license and must:

- Have a valid License Number and Product Number. For a 3-User Value-Pack, use the numbers from the Value Pack.
- Install the same version year of QuickBooks. For example, all users must have QuickBooks 2011.
- Have read/write access and create/delete rights to the directory where the company file is stored.

To enable other users to work in the company file, the company file must be stored on a computer on your network, and you need to complete some additional installation and setup steps on the computer where the company file is stored.

**Note:** *The number of users who can access the company file at the same time is determined by the number of licenses you purchase, up to a maximum of 5 users accessing the file at the same time.*

## Network setup

### For network hosting setup

To run QuickBooks in a network hosting environment, you must have Microsoft Windows 7 (all editions except Starter and Basic), Microsoft XP, or Microsoft Vista installed.

In a network hosting environment, each computer has its own full version of QuickBooks (or the QuickBooks Database Server Manager) installed; however, the QuickBooks company file is located on only one computer, which must be turned on and available on the network. Networks set up for hosting files do not use a dedicated file server, so a single, dedicated computer is not required to share files. Thus, all the networked computers have the option to share their resources.

For example, you might run your small business by using QuickBooks on two computers—yours and one that’s used by an employee. In this case, you still need to set up a simple network to

## Installing QuickBooks

share your company file. Otherwise, you'll need to make a backup of your company file to move it or e-mail it between the two computers.

**Note:** *Windows XP users must have at least Standard user rights to write to the registry keys and be able to run QuickBooks.*

### For dedicated server setup

To run QuickBooks in a network environment with a dedicated server, you must have Windows 2003 Server, Windows 2008 Server, Windows XP Professional, Windows 7 (all editions except Starter and Basic), or Microsoft Vista. See "Additional hardware and software" on page 2 for Windows Service Pack recommendations.

Networks with a dedicated server have at least one computer (the server) dedicated to sharing files, printers, or other resources. You only store your company file on the server; you do not run QuickBooks on this computer. During installation choose Custom and Network options. Select **I will NOT be using QuickBooks on this computer.**

## Installing QuickBooks

This section explains how to install QuickBooks on a computer and how to begin using the program after installation. If you are a new user, refer to the "New user installation" section below. If you are an existing user, refer to the "Existing user (upgrader) installation" section on page 6.

**Note:** *If you want to convert data from Quicken, follow the installation instructions and then refer to "Converting data from other applications" on page 10.*

### New user installation

If you are upgrading from a previous version of QuickBooks (not from another accounting tool), refer to "Existing user (upgrader) installation" on page 6.

#### To install and start QuickBooks:

- 1 Shut down all running programs, including antivirus programs.
- 2 Insert the QuickBooks CD in your computer's CD-ROM drive. If the installer doesn't start automatically:
  - Click **Start** from your Windows menu (bottom left of your screen).

### Did You Know?

#### *Back up your previous accounting system*

If you have an existing business, make sure that you've backed up your financial records from your previous accounting system. The IRS requires you to keep this information for 10 years. You should also keep any software and hardware that your previous accounting system used, or have printouts of all the information and accounting reports.

#### *Troubleshoot error messages*

If you receive an error message during installation, and restarting your system does not resolve the problem, you can search for information about the error message at: [www.quickbooks.com/installation](http://www.quickbooks.com/installation).

- Choose **Run**.
- Type **D:\setup.exe** (where D is your CD drive).
- Click **OK**.

3 Follow the onscreen instructions.

4 To start QuickBooks, double-click the QuickBooks icon  on the desktop or click the Windows Start button and then click QuickBooks from the Programs group.

**Note:** If you encounter problems when installing QuickBooks or have specific installation questions, refer to *Frequently Asked Questions* on page 18. You can also visit the *QuickBooks Installation Center* at <http://support.quickbooks.intuit.com/support/installcenter/default.aspx>.

## Next steps

### Create your QuickBooks company file

For detailed information about creating your company file and setting up your company in QuickBooks, see “Setting Up Your Company in QuickBooks” on page 12.

### Set up QuickBooks for multiple users

After you install QuickBooks on each computer on your network and set up your company file, you need to perform these additional tasks:

- **Set up user names and passwords for each user.** You will need to assign one user to be the Administrator who defines all other users’ access. Refer to the in-product Help for instructions on setting up user names and passwords.
- **Share the folder that contains your QuickBooks company file across your network.** You can press **F2** while in QuickBooks to locate your company file. See your operating system’s documentation to learn more about sharing folders.
- **Register each copy of QuickBooks**, as described in “Registering QuickBooks” on page 10.
- **Turn on multi-user mode for each computer on your network.**
  - 1 Go to the **File** menu and click **Switch to Multi-user Mode**.
  - 2 Click **Yes**.

## Existing user (upgrader) installation

If you own a previous version of QuickBooks and are upgrading to QuickBooks 2011, you must first install the new program and then update your company file.

### To install QuickBooks:

- 1 Shut down all running programs, including antivirus programs.
- 2 Insert the QuickBooks CD in your computer’s CD-ROM drive.
- 3 Follow the onscreen instructions.
- 4 After installation, the File Management Tool might instruct you to move your company files or to perform some additional installation modifications. Follow the onscreen instructions.
- 5 To start QuickBooks, double-click the QuickBooks icon  on the desktop or click the Windows Start button and then click QuickBooks from the Programs group.

6

## Installing QuickBooks

**Note:** If you encounter problems when installing QuickBooks or have specific installation questions, refer to *Frequently Asked Questions* on page 18.

### Next steps

#### Update your QuickBooks company file

For instructions to update your company file, see “To update your QuickBooks file” on page 8.

#### Set up QuickBooks for multiple users:

After you install QuickBooks on each computer on your network and set up your company file, you need to perform these additional tasks:

- **Set up user names and passwords for each user.** You will need to assign one user to be the Administrator who defines all other users’ access. Refer to the in-product Help for instructions on setting up user names and passwords.
- **Share the folder that contains your QuickBooks company file across your network.** You can press **F2** while in QuickBooks to see the location of your company file. See your operating system’s documentation to learn more about sharing folders.
- **Register each copy of QuickBooks**, as described in “Registering QuickBooks” on page 10.
- **Turn on multi-user mode for each computer on your network.**
  - 1 Go to the **File** menu and click **Switch to Multi-user Mode**.
  - 2 Click **Yes**.

#### Updating your QuickBooks company file

This section describes how to update a company file created in a previous version of QuickBooks for Windows. Before you can update your company data, you must install the new version of QuickBooks as described in “Installing QuickBooks” on pages 5–7.

Back up your data before opening it in a new version of QuickBooks. You can back up to your hard drive or to a backup disk.

**Caution** Once you update an existing company file to QuickBooks 2011, you cannot read or use that file in an older version of QuickBooks software.

### Did You Know?

#### *Installing from a server*

If your QuickBooks CD is mounted on a server or a shared CD-ROM drive, you can install from the CD, but you cannot install from the CD to a remote computer.

#### *Choosing where to store your company file in a multi-user environment*

Choose a location for your company file where all the computers that need to use QuickBooks can access the file. You might want to put the company file on the computer of the person who most frequently uses QuickBooks. This enables that person to have the fastest access to the company file.

#### *Improving performance in multi-user mode*

To improve QuickBooks performance in multi-user mode, consider these tips:

- Store company files on the fastest or most powerful computer, preferably a dedicated server.
- Run reports during off hours.
- Refresh reports only when you’re ready to use or print them.
- Avoid keeping unnecessary QuickBooks windows or other applications open.

### To update your QuickBooks file:

- 1 In QuickBooks 2011, open your company data file (that is, the company file you used with your previous version of QuickBooks).
- 2 If the Move Company File utility opens, we suggest that you move the file from the Program Files folder to the Quickbooks recommended location.

*Note: The Windows Program Files folder is no longer a recommended location for storing company files.*

- 3 If prompted, enter the Administrator password.
- 4 When prompted, select the "I understand that my company file will be updated to this new version of QuickBooks" checkbox and then click **Update Now**.

If the backup message is not displayed, choose the option to open an existing company file, enter a file name and location, and then click **Open**.

- 6 When prompted to back up your data, click **OK**.
- 5 In the Save Copy or Backup window, follow the onscreen instructions to back up your company file.

**Important:** Failing to back up your file might result in lost data if you encounter a problem during the update process. Do not overwrite existing backups with this upgrade backup.

- 7 When prompted to confirm that you want to update your file, click **Yes**.

### If an update problem occurs

If you attempted to update your file and the update failed, you must perform steps in your older version of QuickBooks to fix the problem. If you removed your older version of QuickBooks, reinstall it to a new directory. Do not install the older version in the directory where you installed QuickBooks 2011, and do not uninstall QuickBooks 2011.

### In QuickBooks 2011:

- 1 Choose **File > Utilities > Restore Backup For Earlier QuickBooks Version**.
- 2 Click the  button next to the **Backup filename** field.
- 3 Find and select the QuickBooks backup made during the update process and then click **Open**. The default location is where you last selected to save backup company files.
- 4 Click the  button next to the **Restored filename** field.
- 5 In the **Save in** list, select the folder where you want to save the restored company file.

If you have not created your own folder for your company file, you should probably save the restored file in the default company file location. QuickBooks uses the following default location, depending on your Windows operating system when creating new company files or moving existing company files:

- **Windows XP:** C:\Documents and Settings\All Users\(\Shared) Documents\Intuit\QuickBooks\Company Files

## Installing QuickBooks

- **Windows Vista:** C:\Users\Public\Public Documents\Intuit\QuickBooks\Company Files

**Note:** Windows XP users see the folder as "Shared Documents" when browsing (clicking folders) but QuickBooks and Windows display the folder only as "Documents" in paths and addresses.

- **Windows 7:** C:\Users\Public\Documents\Intuit\QuickBooks\Company Files

- 6 Enter a unique name for the restored file in the **File name** field (you don't want to overwrite an existing company file), and then click **Save**.
- 7 Click **OK**.

### In your previous version of QuickBooks:

- 8 Open your previous version of QuickBooks, select **File > Open or Restore Company**, then choose **Open a Company File**. Navigate to the file you just restored and open it.
- 9 Choose **File > Utilities > Rebuild Data**.

**Caution** The Rebuild Utility forces you to create another backup. Use a new CD or file name (for example pre-update2011.qbb). Do not overwrite any existing backups.

- 10 After the Rebuild is complete (which might take a long time depending on the size of your company file), exit your previous version of QuickBooks.
- 11 If you reinstalled your previous version of QuickBooks over your QuickBooks 2011 installation, you must reinstall QuickBooks 2011 (as described in "Installing QuickBooks" on pages 5–7) before proceeding to the next step.
- 12 Start QuickBooks 2011.
- 13 Go to the **File** menu and click **Open or Restore Company**.
- 14 Select the appropriate directory and file name of the company data you just rebuilt and click **OK**.

The update should take place normally. If you still experience update problems, visit [www.quickbooks.com/installation](http://www.quickbooks.com/installation).

### Why are passwords important?

Passwords limit access to your company file. To open a password-protected file, each person must enter his or her user name and a unique, case-sensitive password. Defining users and passwords helps prevent unwanted people from accessing your company's confidential data.

We strongly recommend that you password-protect the Admin user. Otherwise, anyone who can access the company file will have full access rights. By defining users and their access rights, you not only control who can open your company file, but also what data they can view and tasks they can perform.

## Registering QuickBooks

You can use QuickBooks for 30 days without registering. After 30 days, you must register QuickBooks.

Go to the **Help** menu and click **Register QuickBooks**. If web registration is not successful, you can register by phone. The toll-free QuickBooks registration line is available from 5:00 a.m. to 6:00 p.m. (Pacific Standard Time), 7 days a week.

If you add additional users to your license, you can update your license information by going to the **Help** menu, clicking **Manage My License**, and then clicking **Sync License Data Online**.

**Note:** *If you choose to install QuickBooks on a second computer, or if you need to move your installation to another computer, you will need to re-register QuickBooks.*

## Getting the latest updates to QuickBooks

From time to time, Intuit provides updates to QuickBooks that can be downloaded from the Internet. These updates might include maintenance fixes or new Help information. You can choose to update QuickBooks automatically or manually.

For a complete description of and instructions for the different update options, including how to share updates in a multi-user environment, refer to the in-product Help.

## Converting data from other applications

If you are converting financial data from another application (such as Quicken or Excel), refer to the instructions below for the appropriate application.

### Quicken

Detailed instructions about converting Quicken files to QuickBooks files are provided in the QuickBooks in-product Help. Converting files is not difficult, but does require you to prepare the file properly.

**Note:** *You cannot create a new QuickBooks company file and then import your Quicken data into it.*

**To view the file preparation and conversion instructions:**

- 1 Start QuickBooks.
- 2 Go to the **Help** menu and click **QuickBooks Help**.
- 3 Click the **Search** tab in the **Help** window.
- 4 Click in the **Search** field and enter `converting Quicken data`.
- 5 Click **Converting Quicken Data to QuickBooks (overview)** for information about preparing your Quicken data, or click **Converting your Quicken data to QuickBooks (procedure)** for step-by-step instructions.

## Installing QuickBooks

**Note:** If your QuickBooks file is ready to be converted, you can convert it. Go to the **File** menu, click **Utilities**, click **Convert**, and then click **From QuickBooks**.

### Peachtree

To convert a Peachtree file (version 2001 through 2011) in QuickBooks, you need to download and run a separate conversion tool.

**Note:** QuickBooks must be installed on your computer before you run the conversion tool.

**To convert and open your Peachtree file to QuickBooks:**

- 1 Go to the **File** menu, click **Utilities**, click **Convert**, and then click **From Peachtree**. Click **Yes** to download the QuickBooks conversion tool. QuickBooks opens a browser window. Scroll down below **Helpful Links** and click **Get free downloadable conversion tool**.
- 2 Scroll down to complete the short form and click **Submit**.
- 3 Click **Download**.
- 4 When the tool finishes downloading, you will be prompted to run the tool. Check the "Launch QuickBooks Conversion Tool" and click **Finish**. Or, you can run the tool later by going to the folder where you installed the tool and double-clicking **QBConversionTool.exe**.
- 5 Follow the onscreen instructions.

### Microsoft Small Business Accounting/Office Accounting

To convert a Microsoft Small Business Accounting/Office Accounting file (version 2001 through 2009) in QuickBooks, you need to download and run a separate conversion tool.

**Note:** QuickBooks must be installed on your computer before you run the conversion tool.

**To convert and open your Microsoft Small Business Accounting/Office Accounting file to QuickBooks:**

- 1 Go to the **File** menu, click **Utilities**, click **Convert** and then click **From Microsoft Small Business Accounting** or **From Microsoft Office Accounting**.
- 2 Scroll down to complete the short form and click **Submit**.
- 3 Click **Download**.

### Did You Know?

#### Company file

The company file is the data file that QuickBooks uses to store and manage all the information and financial transactions for your business. QuickBooks company files have the extension **.qbw**.

#### Historical transactions

A list of all business transactions as of a specific date. In QuickBooks, you can have many different types of historical transactions, including:

- Estimates
- Invoices
- Sales receipts
- Customer payments
- Credit memos
- Purchase orders
- Item receipts
- Bills
- Payments to vendors
- Credits with vendors
- Journal entries
- Payroll transactions

#### E-mailing a company file

The QuickBooks portable company file (\*.qbm) is a compact version of your company file. You can use the portable company file to move the company file to another computer or to e-mail the company file to another person, such as your accountant.

To learn more about the portable company file, refer to the in-product Help.

- 4 When the tool finishes downloading, you will be prompted to run the tool. Check the “Launch QuickBooks Conversion Tool” and click **Finish**. Or, you can run the tool later by going to the folder where you installed the tool and double-clicking **QBConversionTool.exe**.
- 5 Follow the onscreen instructions.

## Setting Up Your Company in QuickBooks

The first thing you need to do in QuickBooks is create a **company file** for your business. Setting up your company file properly is the most important thing you can do to have QuickBooks help you manage your business efficiently.

Creating a company file is easy with the EasyStep Interview and should take you about 15 minutes to complete. Then, depending on the complexity of your business, completing your company setup can take anywhere from a few minutes to a few hours. The amount of time varies based on how much detail you add about your accounts, customers, vendors, employees, products, and services, as well as the number of **historical transactions** you want to enter.

When you set up your company file, QuickBooks will prompt you for details about your company. Before you begin the setup process, gather the information shown in the Getting Started Checklist on pages 12–13. Some of this information you’ll need to complete the EasyStep Interview; other information you will need as you begin to use QuickBooks.

### Create your company file

After you have gathered the company information listed in the Getting Started Checklist on the next page, you can set up your business using the QuickBooks EasyStep Interview. (Not all of the information in the checklist is required for the EasyStep interview; however, you will need this information as you use QuickBooks to run your business.) The EasyStep Interview walks you through the setup procedure and helps you tailor QuickBooks for your business.

#### Getting Started Checklist

<b>Company name and address</b>	You’ll need both the legal and casual name for your company. The legal company name is the name you use when filing taxes for your business. The casual company name is the name that you want to appear on invoices, statements, reports, etc. (This is your “Doing Business As” name.)
<b>Federal Tax ID Number</b>	The nine-digit number issued to you by the IRS. The Federal Tax ID number is also called a EIN (Employer Identification Number). If you don’t have a Federal Tax ID number, you can either obtain one by submitting Form SS-4 (call 1-800-TAX-FORM to get this form), or you can use your Social Security number (if you are a sole proprietorship and you do not pay wages to employees or file pension and excise tax returns).
<b>Sales tax information</b>	If you charge sales tax, you will eventually need to know the sales tax rate you charge, how much sales tax you owe as of your start date, and the name and address of the agency (for example, California Franchise Tax Board) to which you pay your sales tax.

## Installing QuickBooks

### Getting Started Checklist, continued

<b>Start date</b>	<p>QuickBooks uses a start date as the point at which you begin entering your business transactions. You must enter all historical transactions between your start date and today to ensure complete accounting records for your business.</p> <p>Many business owners base their accounting records on their fiscal year, so that they can see transactions for the entire year. If this is not important to you, you can choose a different starting point, such as today or the first of the month, quarter, or year.</p>
<b>Bank statements, credit card accounts, and outstanding checks</b>	<p>You'll need the bank statement for each of your bank accounts with a closing date that's before your start date. The closing balance on this statement will be your opening balance for the bank account you create in QuickBooks, and then you'll enter all the open transactions, and all the new transactions from the start date forward. Eventually, you will need to have your latest bank statement balances and any outstanding checks, deposits, withdrawals, or charges for all of the accounts you want to set up and manage in QuickBooks, including credit cards, bank accounts, lines of credit, and loans.</p>
<b>Optional information</b>	<p>You will need to enter detailed information about your customers, vendors, and employees, as well as the products and services you sell, the products that you hold in inventory, and any additional <b>assets</b>.</p>
<b>Payroll</b>	<p>If you are using Payroll, you should gather the following information about your employees: company information; rate of pay, benefits, and miscellaneous additions and deductions; withholdings; tax information; employee information; year-to-date history; liability payment information; and direct deposit information.</p>

### Key Terms

#### **Assets**

Company assets are the things that your company owns. QuickBooks distinguishes between two types of assets:

**Current assets:** Assets that you are likely to convert to cash within one year (such as the cash you have on hand, the money in your checking and savings accounts, and the money your customers owe you).

**Fixed assets:** Assets that you do not expect to convert to cash within one year. A fixed asset is usually something you use to run your business (such as a truck, cash register, or computer).

### Did You Know?

#### **Confirming your opening balance when transferring data to QuickBooks**

If you used an accounting program before using QuickBooks and you are now transferring data from that program to QuickBooks, make sure that the opening balance for your new bank account in QuickBooks is based on your bank statement and not the bank balance from your previous accounting software. The balance of the bank account from your previous accounting software will include transactions that the bank has not cleared.

## To create your company file:

- 1 Start QuickBooks by double-clicking the QuickBooks icon  on the desktop or clicking the Windows **Start** button and then clicking **QuickBooks** from the **Programs** group.
- 2 Click **Create a new company file**, or go to the **File** menu and click **New Company**.
- 3 The Welcome screen for the EasyStep Interview opens. Click **Start Interview**.

**Note:** We recommend that you do not skip the interview process. The more information you enter with the EasyStep Interview, the more accurate your company file will be when you begin to use QuickBooks for your business.

However, if you are an experienced QuickBooks user and prefer to create your company file manually, you can skip the EasyStep Interview by clicking **Skip Interview** on the EasyStep Interview Welcome screen. You will be prompted to enter some basic company information and to save the company file.

- 4 Follow the onscreen instructions and complete the interview.

## QuickBooks Setup

After you've created your company file, QuickBooks Setup steps you through entering critical information into QuickBooks. Follow the onscreen instructions to set up:

- The people you do business with (so you can bill your customers, pay your vendors, and track your employees)
- The products and services you sell
- Your bank accounts

## Quick Start Center

Use the Quick Start Center to complete common startup tasks. Create invoices or enter sales receipts to track money coming in. Enter bills or write checks to track money going out. You can also view customer and vendor account balances.

## Reviewing your company setup

Depending on your business, there may be a few additional tasks to complete. Review the information in this section to ensure your company file is properly set up and that your data is complete.

### Enter your company information

*Do this task if you did not enter this information in the EasyStep Interview.*

To enter the contact and legal information for your company, go to the **Company** menu and click **Company Information**. To learn more about each of the fields and where the information you enter will be used in QuickBooks, click the **Help** button.

### Review your Chart of Accounts

If you used the EasyStep Interview, a chart of accounts based on your type of business was set up for you. Review the chart of accounts to be sure it accurately reflects the accounts you need to run your business. You can change account names and edit, delete, or add accounts

## Installing QuickBooks

as necessary. For example, you will need to add any business-related bank, credit card, or loan accounts. To view your Chart of Accounts, go to the Lists menu and click Chart of Accounts.

### Numbering your accounts

Some businesses prefer to organize their accounts by number. Adding numbers can help you identify the type of accounts, thereby speeding up your account selection on various forms. You might want to develop and follow a consistent account naming and numbering convention. For example:

- 10000-19999 - Assets
- 20000-29999 - Liabilities
- 30000-39999 - Equity
- 40000-49999 - Income
- 50000-59999 - Cost of Goods Sold
- 60000-69999 - Expenses (or Operating Expenses)
- 70000-79999 - Other Income (not related to daily activity)
- 80000-89999 - Other Expenses (not related to daily activity)

If you want to use numbers to identify your accounts, you need to turn on this preference in QuickBooks, as follows.

- 1 Go to the **Edit** menu and click **Preferences**.
- 2 In the **Preferences** window, click **Accounting** in the list on the left.
- 3 Click **Company Preferences**.
- 4 Select the **Use account numbers** checkbox.
- 5 Click **OK**.

### Enter historical transactions

If your start date is before today's date, you'll need to enter past transactions from the start date to today. This ensures that your QuickBooks records are completely up-to-date and your reports will be accurate.

Enter historical transactions in chronological order. For example, QuickBooks won't know how to credit a customer payment unless you've previously recorded the invoice to that customer. The most efficient way to enter historical transactions is in the account register.

**Note:** *Entering historical transactions is especially important if customers don't pay you at the time they receive goods or services. If you don't enter historical transactions early on, it's hard to track and collect late customer payments.*

Intuit recommends that you enter your transactions in this order (verify with accountant):

- Invoices you've sent out since your start date
- Purchase orders you've issued since your start date that you haven't received in full
- Cash or checks you've received since your start date

- Bills you've received since your start date
- Bills you've paid since your start date
- Deposits you've made to any of your accounts since your start date
- Any other checks you've written (for things other than bills) since your start date
- Employee year-to-date information paid from January 1 through your start date
- Payroll liabilities owed at the time of your start date (for manual payroll and tracking payroll transactions only)

**Note:** *If you don't have time to enter all your historical transactions right away, don't worry. You don't need to enter all your past transactions before you start using QuickBooks for new transactions. Enter new transactions as they occur. Then catch up with historical transactions when you can. Remember, though, that your account balances will be incorrect (and your reports may be wrong) until you enter all the past transactions.*

**Note:** *If you subscribe to a QuickBooks payroll service, you will be asked to add year-to-date payroll information during payroll setup. If you do not provide this information, your payroll tax information may not be accurate.*

### Complete your bank account information

After you've entered your historical transactions, your account registers will contain entries reflecting bills you've paid, checks and paychecks you've written, and deposits you've received. To make your account registers complete, you must also enter these transactions:

- Checks or other charges that happened before your start date but didn't appear on statements before your start date (i.e., didn't clear)
- Other checks you wrote after your start date that were not for bills or accounts payable (for example, credit card payments)
- Deposits you made after your start date that were not customer deposits
- Deposits you made before your start date but that didn't appear on statements before your start date
- Bank charges and fees
- Interest paid on your account

Refer to the in-product Help for step-by-step instructions on how to enter these transactions to make your account registers accurate.

### Enter any optional adjustments

After you've created your company file, you might need to make a few adjustments as of your start date. Depending on your company, you might need to:

- Enter any sales tax liabilities
- Adjust the Uncategorized Income and Uncategorized Expense accounts (accrual basis only)
- Adjust for current income and expenses if your start date is not at the beginning of the fiscal year

## Installing QuickBooks

Refer to the in-product Help for step-by-step instructions on how to enter these optional adjustments. If you are unsure whether you need to enter these optional adjustments, check with your accountant.

### Backing up your company file

The QuickBooks backup file is a compressed version of your QuickBooks company file that contains all transactions through the date the company backup was made. A backup file provides insurance against accidental data loss and can be used to restore your data. QuickBooks backups have a .qbb extension and cannot be opened directly.

To use one of the backup options, go to the **File** menu and click **Create Backup**.

To restore your backup, go to the **File** menu and click **Open or Restore Company**.

To learn more about backing up your company file, refer to the in-product Help.

## What do I do if I have questions?

As you dive in and begin using QuickBooks, you might have questions about how to do a specific task or need advice on a specific aspect of running your business. We've provided a number of self-help resources for you to use to get your answers fast.

- **QuickBooks Learning Center:** The QuickBooks Learning Center<sup>1</sup> provides a set of interactive tutorials you can use to learn about basic QuickBooks concepts and common tasks. Go to the **Help** menu and click **Learning Center Tutorials**.
- **In-product Help:** QuickBooks in-product Help provides context-sensitive Help as you are using the product. Keep the Help window open. As you use QuickBooks, the Relevant Topics section will automatically update to provide you with one-click access to Help on the most common questions for the QuickBooks window you are using. Go to the **Help** menu and click **QuickBooks Help**, or just click **F1**.
- **QuickBooks Live Community:** We know that you have needs and questions that are specific to your business. Now you can ask other QuickBooks users and experts for help and get answers fast, right inside QuickBooks. With Live Community, you can ask your questions without stopping the work you're doing.

Not sure how to do something in QuickBooks? Need advice on how to set up a webstore? Need a tax question answered? Ask the Community. QuickBooks will even let you know when someone has answered your question so you don't have to keep remembering to check back. Go to the **Help** menu and click **QuickBooks Help**. Then select the **Live Community** tab.

## Frequently Asked Questions

### Installation Questions

#### What should I do if I have trouble installing QuickBooks?

- 1 Verify that your system meets the minimum system requirements, listed on page 2.
- 2 Restart your computer.
- 3 Close all open programs, including antivirus programs. Go to the Windows Task Manager (Task List), click the **Applications** tab, and close all open programs.
- 4 Try installing QuickBooks again.

If you need further installation assistance, visit [www.quickbooks.com/installation](http://www.quickbooks.com/installation).

#### What should I do if I can't find my Registration Number?

QuickBooks no longer uses registration numbers. The only numbers you'll need are your Product and License numbers found on a sticker with your QuickBooks CD or by clicking "About QuickBooks" from the Help menu.

#### What should I do if I can't find my License Number or Product Number?

Look for the sticker on your QuickBooks CD folder. If you cannot find the QuickBooks CD folder but have QuickBooks installed on another computer, you can find your License Number and Product Number as follows:

- 1 Start QuickBooks on the other computer and open a company file.
- 2 Go to the **Help** menu and click **About QuickBooks**. Write down the numbers that appear on this screen. Use these numbers for the new installation.

If you are still unable to obtain your License Number and Product Number, you can request new numbers online:

- 1 In your Internet browser window, enter the URL:  
<http://support.quickbooks.intuit.com/support/LicenseNumber/>.

#### Can I install different versions of QuickBooks on the same computer?

**Yes.** You can install multiple versions of QuickBooks (for example QuickBooks 2011 and QuickBooks 2010) on the same computer. However, you cannot run two instances of QuickBooks on the same computer at the same time.

#### Can I revert to an earlier version of QuickBooks?

**Yes.** If you plan to use an earlier version of QuickBooks, do not uninstall QuickBooks 2011 until you restore the backup company file that was created when you updated your company file to QuickBooks 2011.

## Installing QuickBooks

To restore your backup company file, follow steps 1-8 described in “If an update problem occurs” on pages 8-9. If you uninstalled your previous version of QuickBooks, you’ll need to reinstall it to complete the steps.

### Can I install QuickBooks on more than one computer?

You can install QuickBooks on a main computer and one additional computer as long as you are the only person using QuickBooks on both computers. For example, if you bought one copy of QuickBooks for your office, you can install it on your home PC or laptop as well. This does not violate the software license agreement as long as you are the only person using QuickBooks on both computers. However, if multiple users will be accessing QuickBooks on multiple computers, then you must purchase an additional licensed copy for each user.

### What if I do not have Internet Explorer on my computer?

To use QuickBooks, you must have Microsoft Internet Explorer 6.0 or later installed. If you do not have any version of Microsoft Internet Explorer on your system, you can download the latest version (Internet Explorer 8) from [www.microsoft.com/ie8](http://www.microsoft.com/ie8).

**Note:** *Installing Microsoft Internet Explorer 8 will not affect the settings or preferences of other browsers on your system.*

### What should I do if I get an error message during installation?

If you receive an error message during installation and restarting your system does not resolve the problem, go to the QuickBooks Support Web site ([www.quickbooks.com/installation](http://www.quickbooks.com/installation)) to find solutions for common errors.

### What should I do if I get an error message when updating my company file?

If you receive an error message when updating your company file from a earlier version of QuickBooks, refer to the information in “If an update problem occurs” on page 8. You can also go to [www.quickbooks.com/installation](http://www.quickbooks.com/installation) for more assistance.

### Did You Know?

#### *Product Information window*

The **Product Information** window lists information about your software, including the number of entries you have in your lists, the size of your company file, which version of QuickBooks you are running, and the location of your company file. To open the **Product Information** window, press **F2** on your keyboard.

## Other Common Questions

### How do I register my copy of QuickBooks?

You can register online or by phone. Go to the **Help** menu and click **Register QuickBooks**.

### How do I purchase additional user licenses so I can add users to my QuickBooks?

You can add users to your QuickBooks in two ways:

- You can purchase additional copies of QuickBooks in a store or;
- You can buy additional user licenses by phone or web.

To add a license to your existing QuickBooks license by phone or web, go to the **Help** menu, click **Manage My License**, and then click **Buy additional user license**. Follow the onscreen instructions. For other QuickBooks purchasing questions, call **1-888-246-8848**.

### What should I do if I forget my password?

QuickBooks 2004 and later releases support case-sensitive passwords. If you believe you are entering the correct password, but are still getting the message “The password you typed is incorrect,” your password might include mixed-cased characters.

#### Try the following:

- Attempt to log in by entering the login name of `Admin` and then click **OK** without typing a password.
- Enter your password with Caps Lock or Num Lock turned on or off.
- Enter password variations, using mixed upper- and lower-case characters.
- Enter the password with a space before or after the actual password.
- Type the password in a text editor to confirm that your keyboard is functioning properly.
- Restore a pre-update backup of your file that does not have the case-sensitive password. When you restore this file, you can set your new administrator password at the end of the update process.

If you are still unable to access your file, refer to the Password Recovery Web site:

**<http://support.quickbooks.intuit.com/support/passwordremoval.aspx>** (additional fees might apply).

**Note:** Be sure to write down and save your administrator password in a secure place. Passwords not only protect your company data, but are also required to access your company file if you upgrade your version of QuickBooks.

### How do I download and install an update or patch?

Periodically, Intuit provides updates to QuickBooks that you can download from the Internet. These updates can include a maintenance release (also known as a patch), a new service, or timely information that could be relevant to your business.

To download an update, go to the **Help** menu and click **Update QuickBooks**. Follow the onscreen instructions.

## Installing QuickBooks

### How do I move my QuickBooks file from one computer to another?

To move QuickBooks company files from one computer to another, we recommend that you use a portable company file. The portable company file does not simply copy the data for your QuickBooks company; it compresses the data into a smaller file.

#### To move your company file:

- 1 Create a portable company file on the source computer:
  - a. Go to the **File** menu and click **Create Copy**.
  - b. Select **Portable company file** and then click **Next**.
  - c. Choose the drive (hard drive, CD, or Zip® disk) where you want to save the portable company file. You can use the same file name or enter a new name.
  - d. Click **Save**.
- 2 Take the media containing your portable company file to the computer to which you want to move your company file.
- 3 Open the portable company file on the destination computer:
  - a. Go to the **File** menu and click **Open or Restore Company**.
  - b. Select **Restore a portable file** and then click **Next**.
  - c. Browse to select the portable company file you want to restore, click **Open**, and then click **Next**.
  - d. Browse to select and change the location and file name of the company file that will be created and opened from the portable company file. If you select an existing company file, it will be overwritten with the data from the portable company file.
  - e. Click **Save**.

### How do I remove older or unneeded transactions from my data file?

You can use the Clean Up Company Data utility to remove transactions that you no longer need to keep detailed records of. You can choose to remove transactions as of a specific date (for example, all transactions dated on or before 12/31/04). Optionally, you can choose to remove unused list items, such as obsolete customers and items.

Before removing the transactions, QuickBooks creates an archive copy of your company file and enters general journal transactions that summarize the transactions being removed.

**Note:** *Cleaning up the data in the company file does not reduce the physical size of the company file.*

### How often should I back up or restore my company file?

You should back up your QuickBooks company files daily. Backup copies are important insurance—if you should lose data for any reason, you can restore data from your backup copy. QuickBooks enables you to back up and restore your data in a number of ways.

To view detailed information about each backup and restore option, refer to the in-product Help.

#### To back up a company file:

- 1 Go to the **File** menu and click **Create Backup**.

- 2 Choose the backup option you want, click **Next**, and follow the onscreen instructions.

#### To restore a company file:

- 1 Go to the **File** menu and click **Open or Restore Company**.
- 2 Choose the restore option you want, click **Next**, and follow the onscreen instructions.

#### How do I update my payroll to use the latest tax tables?

If you are a QuickBooks Payroll subscriber, you have two options for updating your tax tables. You can:

- Go to the **Employees** menu, click **Get Updates**, and then click **Get Payroll Updates**. Click **Update**.
- Turn on the Auto-update preference. When a new tax table is available, it will be downloaded automatically and you will be prompted to install.

Payroll updates, which might include compliance enhancements and updated payroll tax forms as well as new tax tables, become available throughout the year. We recommend that you connect to the payroll service at least every 45 days to make sure you have the most current tax table available.

Make sure that you download and install the latest payroll update before you pay employees for the first time.

#### How do I add another company's EIN (Employee Identification Number) to an existing QuickBooks Payroll subscription?

##### To add an EIN for another company:

- 1 Go to the **File** menu, click **Open or Restore Company**, and then choose the company file you want to add.
- 2 Go to the **Employees** menu, click **Payroll Service Activities**, and then click **Use my existing Payroll service subscription**. When asked if you want help setting up payroll in QuickBooks, click **Yes**.
- 3 When asked to identify your subscription, follow the onscreen instructions.
- 4 Click **Add To Subscription** and then click **Next**.
- 5 Enter and confirm the new EIN to be associated with your existing subscription.
- 6 Click **Done**.

When you finish the onscreen instructions, QuickBooks will update your subscription in the new company file. You can run payroll immediately.

**Note:** QuickBooks Standard and Enhanced payroll subscriptions can process payroll for up to three businesses (EINs) on the same payroll subscription. QuickBooks Enhanced Payroll for Accountants can process payroll for up to 50 EINs on the same payroll subscription.
